## How to calculate the daily rate for fees that span the effective date

[Example of water bill calculation] \* The sewage usage fee is calculated in the same way.

In the case of 28m<sup>3</sup> of water used with 13mm diameter, February 10 ~ April 10

- Calculate the two-month fee using the above calculation method for both the current and new fees.
  - (A) Current fee (tax included): 3,910 JPY
  - (B) New fee (tax included): 4,278 JPY
- Calculate the number of days for which the current and new fees apply.
  - (C) Number of days for which the current fees apply: number of days from the day after the last meter reading to March 31 ...49 days
  - (D) Number of days for which the new fees apply: number of days from April 1 until the regular meter reading date ...10 days
- The amount obtained by multiplying (A) and (C), and the amount obtained by multiplying (B) and (D) are added together, Divide by the number of days in two months to calculate.
 
$$((A)3,910 \text{ JPY} \times (C)49 \text{ days} + (B)4,278 \text{ JPY} \times (D)10 \text{ days}) \div 59 \text{ days} = \underline{3,972 \text{ JPY}}$$

## Old and new fee comparison table (13mm diameter, one month use, tax included)
